2. Current-collecting spring (including 2 pcs of spares) - 4 pcs
3. Pan head Phillips screw M1.4 x thread pitch - length (including 1 pc of spare) - 2 pcs
4. Instruction manual - 1 sheet

3. How to install Room Light Type A into a train car

3-1. Disassembly of train car

1. Turn the car over onto its back, separate body from the Chassis Unit as shown in Figure 1.

3-2. Install Room Light Type A

1. Set Room Light Type A on the boss of train’s Chassis Unit according to Figure 2. Then fix the Room Light Type A with a screw using Phillips screwdriver. Check the orientation of the Room Light Type A above the Chassis Unit.

2. Connect electrical power springs between the Room Light Type A and the Chassis Unit using tweezers according to the Figure 3 and 4.

3-3. Reassemble the train car

1. Mount the car body on the Chassis Unit again according to Figure 5.

4. How to light up

1. After installing Room Light Type A into the train, set the train on track with power using rerailer.
2. Turn the speed control dial on a controller and check the LED lights are lit. If the LED lights are not lit, back to “3. How to install Room Light Type A into a train” and check the steps again. Ensure your Room Light Type A and Chassis Unit are dust free.

   * By using a controller with constant lighting function, Room Light Type A can be lit even while the train is stopped. Refer the instruction manual of the controller for more details.

* The brightness depends on the train’s speed if the controller does not have constant lighting function.

5. Trouble and repair

- The user is responsible for any trouble, accident, or injury caused by misuse, disassembly, reassembly or modification to this product. Rokuhana does not repair a product which has been opened, taken apart or modified.
- Specification and appearance of our products are subject to change without prior notification.
- Contact the following Rokuhana customer service if you have any query.
