About adjustable track

Adjustable track is a piece of track that can be adjusted for length between 100mm to 120mm.

This piece of track is used to fill the space between two pieces of track in a layout which is slightly longer or shorter than a standard 110mm piece of track can fill.

How to connect

Connect one side of adjustable track to a track. Extend the adjustable track and connect opposite side.

※ To avoid damage to adjustable track, do not pull hard when you extending it.
