Thank you for purchasing Rokuhana products. Please read carefully before use and use correctly.

**CAUTION**

- For best results, connect and disconnect the track on a flat surface. To avoid any damage of joiners and rails, do not twist the rails and do not use them with excessive force, and assemble (disassemble) them with proper angle.
- Check your track is connected correctly before running your train. Each rail joint should be flush to bumps. If a rail joint is not flush, the train could derail and cause damage to your train and your track.
- Remove dirt from the rail with a rail cleaner before use. Dirty track is evident in jerky movement of your train and headaches that follow.
- The power cannot reach the engine if track and wheels are dirty.
- Do not store in a high-temperature/humidity area or away from sources of heat. Also beware of chemicals such as thinner to avoid deformation effects.

**1. Parts list**

- ① Straight track 110mm - 2pcs
- ② Straight track 50mm - 3pcs
- ③ 55.6mm Trimmer track - 1pc
- ④ 8pc - 1pc
- ⑤ Double slip turnout track - 1pc
- ⑥ Bumper track - 1pc
- ⑦ Screw (For non-power motive) - 8pcs

**2. Guideline to assemble**

- Assemble each track to follow the illustrations.

**3. How to feed the power**

To feed the power from Rokuhana train controller, insert narrow feeder cables at the center of straight track 35mm, 110mm and 220mm. To insert the male feeder of narrow feeder cables, slide out the rail at the center of each straight track, then slide-in the male feeder completely.

**4. How to feed power and play**

There are mainly 2 ways to power and play with this rail set. One is to feed power by one train controller, which provides simple running. The other is to feed power by 3 train controllers which provides a little bit complicated running.

To use 3 train controllers, some of A013 Gap Joiner (sold separately) are necessary.

1. To use one train controller and its running direction

   - To change from one straight track to the other of Slip switch
   - To go straight across of Slip switch

   When Double slip turnout track is in Non-Power running condition, all area can be powered (See Instruction manual of Double slip turnout track).

2. To use 3 train controllers and its running direction

   - To change from one straight track to the other of Slip switch
   - To go straight across of Slip switch

   Using A013 Gap Joiner (sold separately), gray colored area can be controlled separately from that of black colored area.

**5. Trouble and repair**

- The user is responsible for any trouble, accident, or injury caused by misuse, disassembling, or modification to this product. Rokuhana will not repair a product which has been opened, taken apart, or modified.
- Specification and appearance of our products are subject to change without prior notice.
- Contact Rokuhana customer service if you have any query.
